OBJECTIVE:

Ambitious, determined and detail-oriented individual with strong technical experience seeks software developer position with the company that can benefit from my technical experience and communication skills.

PROFESIONAL EXPERIENCE:

Programmer Analyst, Cognizant Technology Solutions Pvt. Ltd., Chennai, India

Sept 2013-Dec 2015

Project Description:

xLTR - Cross Asset Intra Trading Reporting is a Trade reporting system. The main purpose of xLTR project is to report all the trades to Financial Regulatory agencies. The financial-crisis in US during 2007-2010 led to an act called as Dodd Frank act, which is used to monitor all the incoming and outgoing financial events between the traders. Like US, European and Canadian countries have also implemented an act to monitor all financial events.

Responsibilities:

- Monitored the end to end application flow to report if there is any break down in system.
- Automated existing system to reduce time and complexity of the work.
- Daily call with clients to discuss any issues and explain the status of the development.
- Developed spring batch jobs that are required to generate daily reports of source systems (RATS, MUREX, OPENLINK)
- Raised JIRA and fixing the issues raised by testing team.
- Parsed the XML files from source system and inserting into the database.
